LIST OF EXPERIMENT 11

11.Change Hardware compatibility of a VM (Either by clone/create new one) which is already created and configured, using virtual box.

Aim

To change the hardware compatibility of an already created and configured Virtual Machine (VM) in Oracle VirtualBox by cloning the existing VM and modifying its hardware settings.

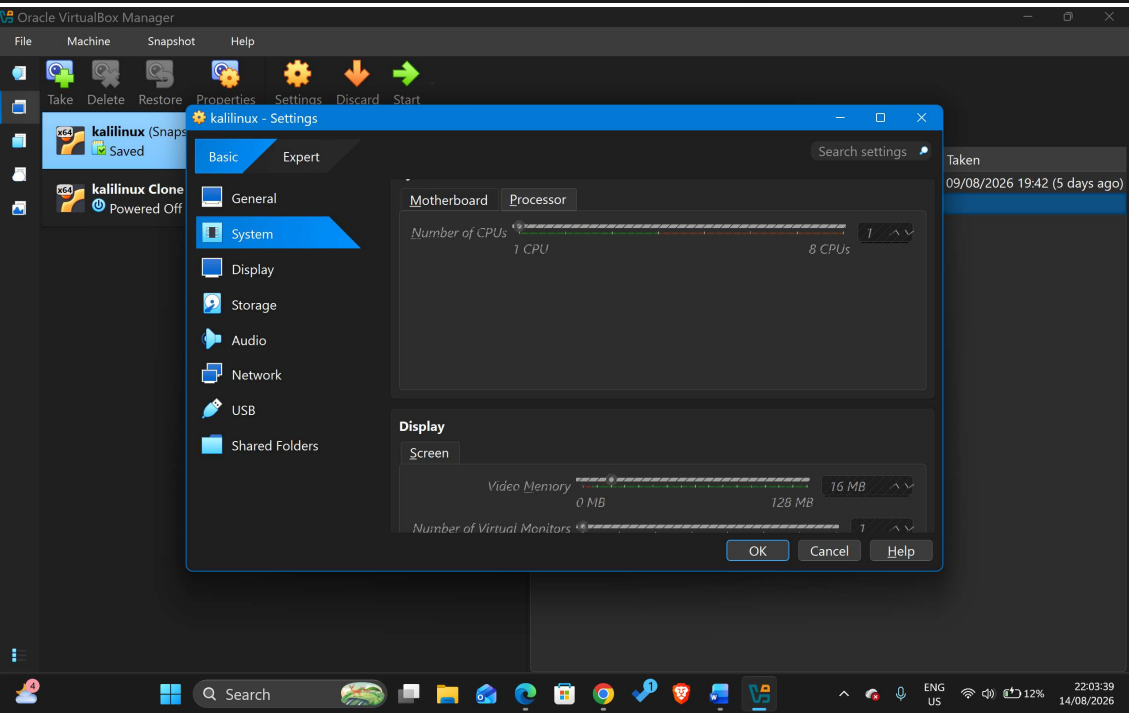

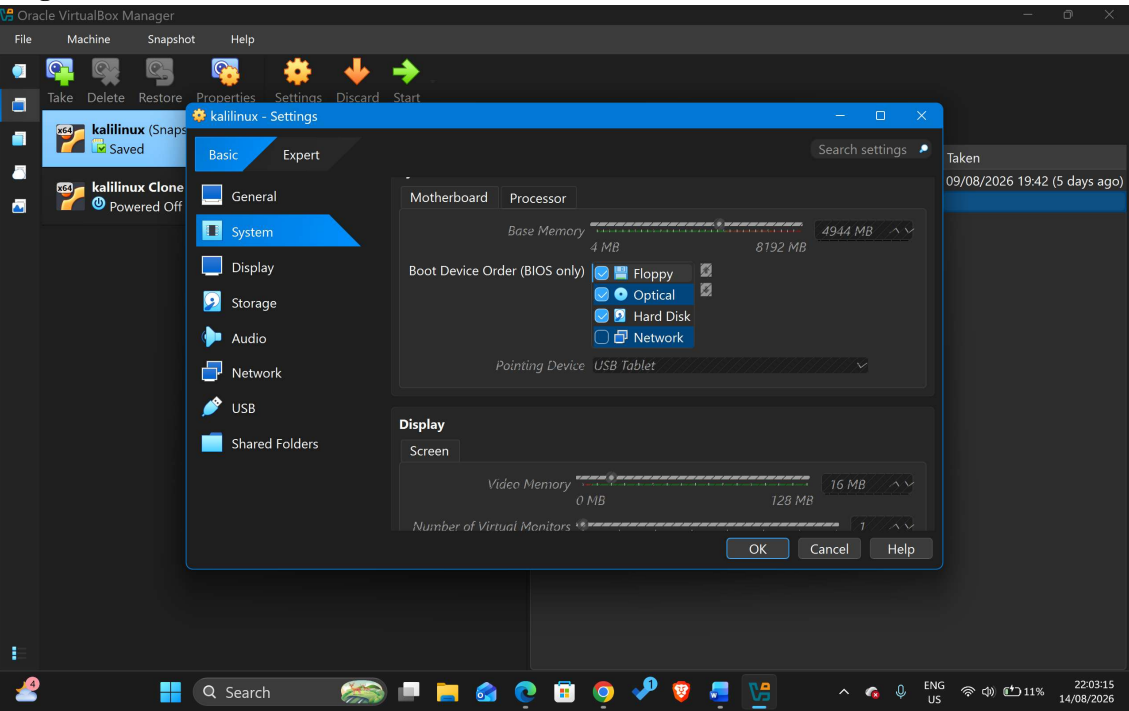

Procedure

1. Open Oracle VM VirtualBox.
2. Select the already created and configured Virtual Machine from the left panel.
3. Make sure the VM is powered off before making hardware changes.
4. Right-click the VM and select Clone.
5. Enter a suitable name for the new VM, such as VM_Hardware_Compatible.
6. Select Full Clone so that the new VM has its own complete copy of the original VM.
7. Select the appropriate clone option and click Finish.
8. Select the newly cloned VM and click Settings.
9. Modify the required hardware configuration, such as:
 - System → Motherboard: Change RAM allocation or boot order.
 - System → Processor: Change the number of CPUs.
 - Display: Change video memory or graphics controller.
 - Storage: Add, remove, or modify virtual storage devices.
 - Network: Change the network adapter configuration.
 - USB: Enable or modify USB controller settings.
10. Click OK to save the changes.
11. Start the cloned VM and verify that the operating system boots correctly.
12. Check the VM's system information to confirm that the modified hardware resources are detected properly.

Result

The existing Virtual Machine was successfully cloned and its hardware configuration was modified in Oracle VirtualBox. The cloned VM started successfully with the updated hardware settings, demonstrating hardware compatibility with the new configuration.
