

SAVEETHA SCHOOL OF ENGINEERING
CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS
LIST OF EXPERIMENT 12

12.Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux), using VMware workstation.

Aim

To demonstrate virtualization using a Type-2 Hypervisor by installing VMware Workstation on a host device and creating and configuring a Virtual Machine (VM) with a Windows/Linux operating system.

Procedure

1. Download and install VMware Workstation on the host computer.
2. Launch VMware Workstation after installation.
3. Click Create a New Virtual Machine.
4. Select Typical (Recommended) configuration.
5. Select the installation media:
 - Installer disc if using a physical installation disc, or
 - Installer disc image file (ISO) and select the required Windows/Linux ISO file.
6. Enter the required details such as:
 - Virtual machine name
 - Username
 - Password, if required
7. Select the location where the VM files should be stored.
8. Specify the virtual disk size according to the requirements. Select whether the disk should be stored as a single file or split into multiple files.
9. Click Customize Hardware and configure the VM resources:
 - Memory (RAM)
 - Processors/CPU
 - Hard Disk
 - Network Adapter
 - CD/DVD drive
 - Other required virtual hardware
10. Click Finish to create the virtual machine.
11. Power on the VM. VMware Workstation boots the selected ISO and begins the operating system installation.
12. Follow the OS installation steps and complete the installation.
13. After installation, restart the VM and verify that the guest operating system boots successfully.
14. Check the configured RAM, CPU, storage, and network settings to verify that the VM is functioning correctly.

Result

A Type-2 Hypervisor, VMware Workstation, was successfully installed on the host operating system. A virtual machine was created, configured with appropriate virtual hardware resources, and a Windows/Linux guest operating system was successfully installed and executed on the VM.
