

SAVEETHA SCHOOL OF ENGINEERING

CSA 15- CLOUD COMPUTING AND BIG DATA ANALYTICS

LIST OF EXPERIMENT 18

18. Create and Configure a New VM Image

Aim

To create and configure a new Virtual Machine (VM) image using a public cloud service provider and demonstrate cloud infrastructure services.

Procedure

1. Log in to the AWS Management Console.
2. Navigate to the **EC2** service.
3. Select **Launch Instance** to create a new virtual machine.
4. Choose an operating system image such as Ubuntu.
5. Select a suitable instance type according to the required resources.
6. Configure the network, storage and security group settings.
7. Select or create a key pair for authentication.
8. Launch the VM and wait until its status becomes **Running**.
9. Connect to the VM using SSH.
10. Update the operating system and install the required software packages.
11. Configure the VM with the required applications and system settings.
12. Select the configured VM and choose **Create Image/AMI**.
13. Provide an appropriate name and description for the new image.
14. Wait for the image creation process to complete.
15. Verify the newly created image and use it to launch another VM if required.

Result

A VM was successfully created, configured and converted into a custom VM image. The image was verified and made available for creating additional VM instances.
