

**SAVEETHA SCHOOL OF ENGINEERING**  
**CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS**  
**LIST OF EXPERIMENT 26**

26. Create a simple cloud software application for Hospital management system for SIMATS library using any Cloud Service Provider to demonstrate SaaS.

**Aim**

To create and deploy a simple cloud-based Hospital Management System for the SIMATS Library using a Cloud Service Provider to demonstrate the Software as a Service (SaaS) model.

**Procedure**

1. Choose a cloud service provider such as Google Firebase, Microsoft Azure, or AWS.
2. Design a simple Hospital Management System with modules like patient records, doctor details, appointments, and medical reports.
3. Create a user-friendly interface using HTML, CSS, and JavaScript (or any preferred framework).
4. Develop the backend using a suitable programming language such as Node.js, Python, or PHP.
5. Store application data in a cloud database such as Firebase Firestore or Azure SQL Database.
6. Configure user authentication for secure login and access.
7. Deploy the application on the selected cloud platform.
8. Access the application through a web browser to demonstrate SaaS functionality.
9. Test features such as adding, updating, deleting, and viewing hospital records.
10. Verify that multiple users can securely access the application over the internet without local installation.

**Result**

A cloud-based Hospital Management System for the SIMATS Library was successfully developed and deployed using a Cloud Service Provider. The application demonstrated the Software as a Service (SaaS) model by allowing users to access hospital management features through a web browser with secure authentication, cloud storage, and internet-based accessibility.
